

XO Reduces TCO by 60%

INDUSTRY
Technology, ISP

USE CASE
Data Protection, Cloud
Integration, File Services

SOLUTION PARTNERS
VMware, Oracle, Microsoft

CHANNEL PARTNER
INTEGRATION

Key Benefits

- Simplified Operations
- Cohesity's easy-to-use and manage interface allowed the team to reduce the learning curve and quickly ramp up.
- Lower CapEx – Out of the gate, Cohesity was less than half what it would have cost to deploy the alternate solution.
- Instead of hiring an army of five to six admins, a single admin could manage XO's entire environment.

XO Communications, a Verizon Company, owns and operates one of the largest IP and Ethernet networks that customers rely on for their private data network, cloud connectivity, unified communications, internet access, and managed services. The company has 1.5 million fiber strand miles in its network, including approximately 20,000 route-miles of intercity and 13,500 route-miles of metro fiber. Besides the United States, XO servers are in over 50 countries via a variety of partnerships.

Challenges

XO Communications is in the business of providing VoIP, telecommunications and cloud services to its customers, and it is the IT team's responsibility to achieve and maintain high-availability and uptime for its customers. The team operates eight data centers across the country, three of which are managed for various government entities. Currently the team has three vCenters and over 1200 physical servers, which it will soon be virtualizing.

Some of XO's government contracts require the company to keep logs, backups, and audits for three years, resulting in a lot of data that needs to be protected and archived. To meet customer needs and accommodate the growing data, the team contemplated the idea of deploying rows of racks across its data centers, and hiring five to six additional admins to manage the new infrastructure. In its business, XO needs to control administrative costs, and this option would have negatively impacted

“

“Cohesity is designed to optimize capacity and performance. With Cohesity, we can meet our customer requirements without complicating our environment. Besides ease-of-use and simple integration, Cohesity is dedicated to its customers' success.”

Eirik Toft, Systems Administration, XO Communications

its bottom line. Selection criteria while evaluating all the available solutions included:

- Simplified solution that is easy to manage and administer
- Next-generation scalable solution to address growing needs without complicating the environment
- Lower its TCO

Solution

XO heard about Cohesity and after conducting an extensive Proof of Concept, which included Dell EMC Isilon and Veeam, the decision was made to deploy Cohesity's solution.

What sold the team on Cohesity was its ease-of-use and manageability. Cohesity helped the team to reduce its data center footprint and eliminated the need to hire an army of professionals to manage it. This positively impacted XO's bottom line, plus kept the environment simple.

With Cohesity DataProtect the team could now clone and run VMs directly on Cohesity, which helped to optimize its primary storage capacity. The team could also use Cohesity for its test/dev environment.

Results

XO Communications dramatically improved its ROI with Cohesity and lowered its TCO by 60%.

- **Simplified Operations** – As a unified data management solution, Cohesity simplified XO's data protection. Cohesity's easy-to-use and manage interface allowed the team to reduce the learning curve and quickly ramp up.
- **Lower CapEx** – Out of the gate, Cohesity was less than half what it would have cost to deploy the alternate solution. Cohesity's design to optimize capacity allowed XO to reduce its overall footprint and deploy less hardware.
- **Lower OpEx** – Instead of hiring an army of five to six admins, a single admin could manage XO's entire environment. With a smaller footprint, the team also saved on power and cooling costs.

Recap

XO Communications selected Cohesity to build its data management environment. Instead of deploying rows of racks in its data centers, XO reduced its data center footprint, simplified the environment, and reduced TCO by 60%.
