

Become data protection certified with Cohesity

Boost your skills and career

Leaders in every industry are looking for data protection professionals to help them increase efficiency and accelerate cloud adoption while lowering costs and risks. Once you learn it, prove your data management expertise by passing a rigorous, independently developed and proctored certification exam. Then show off your new accomplishment with globally recognized badges! Cohesity certification advances careers, strengthening professional standing and increasing job efficiency and satisfaction.

Start with Associate Certification and Advance Your Data Protection Skills to Professional

Discover data management certifications

Certifications from Cohesity enable technical professionals to demonstrate their current data protection skills as well as mastery of increasingly difficult concepts and tasks that arise in real-world environments. Associate is a recommended foundational-level certification on the journey to being a Cohesity Certified Protection Professional.

Begin with Associate Certifications

Your path to Certified Protection Associate - DataProtect takes you through multiple use cases.

Key Benefits

- Advance your data protection skills
- Build your resume and value to your organization
- Share your accomplishments with social networks
- Increase your job efficiency

Protection Associate - DataProtect Certification

Data protection certification is for individuals who want to demonstrate that they have mastered a modern scale-out, software defined solution to protect data from on-premises to the edge and the cloud. It is also a recommended foundational certification for the Protection Associate - Multicloud certification.

- Assesses your knowledge of and skills with Cohesity DataProtect
- Test your ability to administer and operate Cohesity DataProtect to protect multiple workloads, including virtual and physical
- Test your ability to recover data instantly, ranging from individual files up to thousands of VMs
- Recommended for data protection administrators, operators, or help desk staff

Implementation Professional - SmartFiles Certification

Implementation Professional - SmartFiles certification is for individuals who want to build, test and assess their skills with software-defined file and object services to better manage unstructured data—the vast majority of enterprise data—at scale, anywhere. It is also a recommended foundational certification for the Multicloud Solutions certification.

- Assess your knowledge of and skills with Cohesity SmartFiles
- Test your ability to administer and operate Cohesity SmartFiles for multiple workload types
- Test your ability to monitor, secure, and analyze file and object data using Marketplace Applications
- Recommended for file and object storage administrators, operators, or help desk staff

Protection Associate - Multicloud Certification

Multicloud certification assesses a deeper level of expertise and proves you understand how to simplify and automate data protection use cases such as archiving, tiering, and replicating across multicloud environments.

- Assess your knowledge of and skills using Cohesity in and with public cloud environments including AWS, Azure and GCP
- Test your ability to administer and operate Cohesity in multicloud environments for disaster recovery, archiving, tiering, dev/test clones and native-cloud backup
- Recommended for data center, cloud, backup, and file and object storage administrators, operators, or help desk staff

Protection Professional Certification

Achieve the Protection Associate - DataProtect, Protection Associate - Multicloud and Implementation Professional - SmartFiles and receive your Cohesity Protection Professional certification, proving you have the capability to help any organization advance their goals with their data.

Security Specialist Certification

Cohesity Security Specialist certification focuses on ensuring individuals are able to successfully use and deploy the Cohesity AI-powered data security and management solutions for robust threat protection. The successful exam candidate should be able to identify potential security risks and how to mitigate those risks by deploying both industry-standard knowledge as well as implementing Cohesity best practices and Cohesity security hardening guidelines.

Three simple steps to certification

1) Learn More About Each Exam, and Take Free Practice Exam Questions to Help You Prepare:
