

DataProtect delivered as a Service for Microsoft 365

Cloud native, delivered as a service

According to Gartner, SaaS application data is expected to be one of the fastest growing sets of enterprise critical data over the next five years. Yet, built-in data retention features from cloud providers are largely insufficient for enterprise backup. Instead, with a one-size-fits-all policy approach, each SaaS and cloud provider offers backup features for its services but not others' services.

Enter Cohesity DataProtect delivered as a Service, our fully-managed BaaS offering. Protect and secure your data, dramatically simplify IT operations, and optimize IT costs. By consolidating critical SaaS, cloud-native, and on-premises workloads onto a single platform, Cohesity DataProtect extends the built-in protections offered by cloud providers to keep your data safe.

Top benefits of Cohesity DataProtect delivered as a Service for Microsoft 365

Simplified IT Operations

- Eliminate point products with global access to accounts, services, and multiple clouds
- Save time with a single UI for hybrid and multicloud data management
- Set and forget data retention rules by creating automated policies with specific SLAs, saving time
- Unlock additional value from your Microsoft 365 backup data and improve decision-making speed and accuracy with Gen AI

Comprehensive Protection

- Separate and isolate data for legal, compliance or ransomware protection
- Store backed-up data in its secured file system in immutable snapshots that can not be accidentally or maliciously modified or deleted
- Protect data securely with encryption and flexible key management
- Minimize the risk with Zero Trust Security principles, including granular RBAC, MFA, SSO, and more

Fast, Flexible Recovery

- Use global search to look for and restore individual documents, files, or emails
- Recover to any point in time, to the original or an alternate location
- Quickly recover clean files in bulk to prevent reinfection or provide granular recovery for mailboxes
- Meet SLAs with unified policy management applied across cloud datasets
- Customize protection beyond default retentions to meet your business needs

Sign up, connect, and protect your Microsoft 365 data

1 SIGN UP: Set up your free trial of Cohesity DataProtect as a Service

The screenshot shows the Cohesity website's 'Get a free trial' page. A modal form titled 'Request your 30-day free trial' is displayed. The form includes fields for First Name, Last Name, Company, Job Title, Email, and Phone. It also has dropdown menus for 'United States' and 'New York', and a dropdown for 'Area of interest'. A checkbox for 'By submitting this form, I confirm that I have read and agree to the Privacy Statement' is present, followed by a 'Request free trial' button.

> Go to www.cohesity.com/free-trial/

This is a detailed view of the 'Request your 30-day free trial' form. It contains the same fields as the previous screenshot: First Name, Last Name, Company, Job Title, Email, Phone, United States, New York, and Area of interest. It also includes the privacy statement checkbox and the 'Request free trial' button.

> Enter your information

2 CONNECT: Register your source, choose your region and Microsoft 365 applications

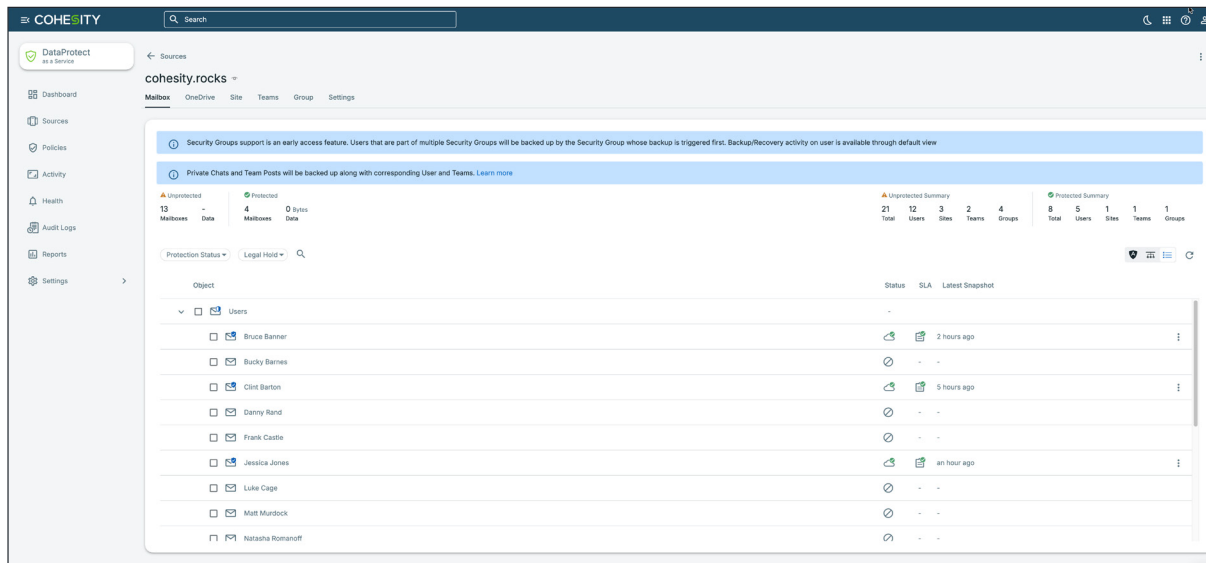

The screenshot shows the 'Select Source' dialog box. It has two tabs: 'SaaS Sources' and 'On-Premise Sources'. Under 'SaaS Sources', 'Microsoft 365' is selected. Under 'On-Premise Sources', there are options for Virtual Machine, SAP HANA x86-x64, Physical, Microsoft SQL, and NAS. Below the tabs, there is a section titled 'To register a Microsoft 365 source, you must have:' followed by a list of requirements. At the bottom, there are 'Cancel' and 'Start Registration' buttons.

> Register a new source or use an existing one

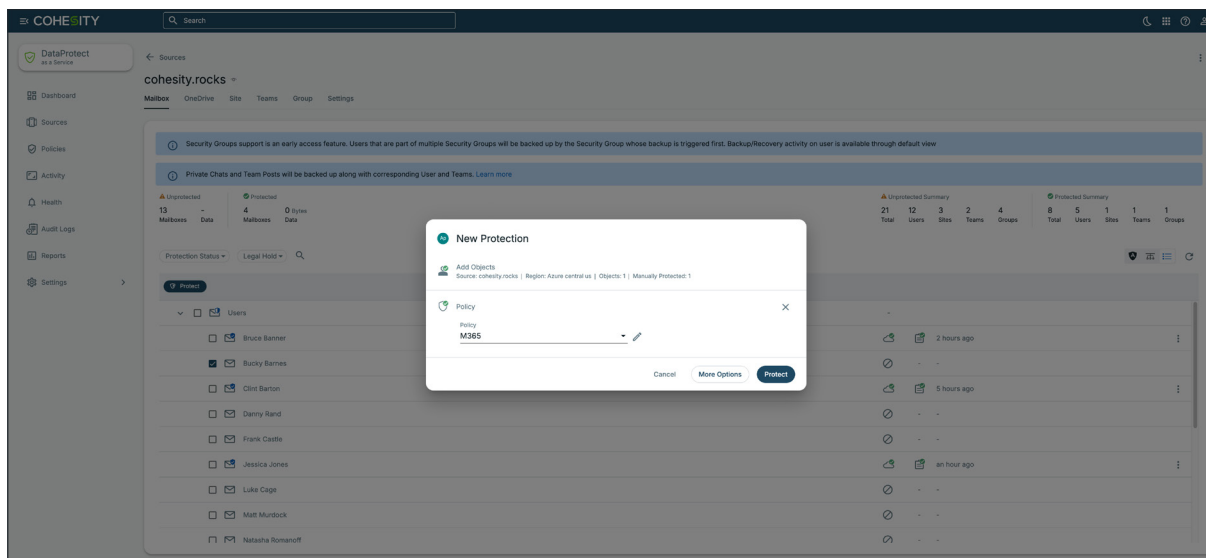

This screenshot shows the 'Register Microsoft 365 Source' dialog box. It has a 'Source Details' section with a dropdown for 'Cohesity Cloud Region' set to 'Azure Central US'. Below this is the 'Microsoft 365 Applications' section, which lists various applications with checkboxes: Mailbox, Private Chats, OneDrive, Groups, Teams, Teams Posts, and Site. A note states: 'Chats and Teams Posts backup APIs are charged separately by Microsoft. All Azure Apps configured by Cohesity must be linked to an Azure Subscription for billing. Learn more'. At the bottom, there is a 'Note: Discovery selection change is not allowed for application with protected objects.' and a section for 'Account Credentials' with a 'Username' field. 'Cancel' and 'Register' buttons are at the bottom right.

> Select your Microsoft 365 applications and backup region

3 PROTECT: Select your source, pick your policy and click protect

› Select your Microsoft 365 objects to backup

› Choose your backup policy and SLA

That's it; it's that easy. Enterprise-grade backup as a service from Cohesity is now up, running and protecting your Microsoft 365 data.
