

## Cohesity Powered: The Trusted Choice for Secondary Data and Apps

IT innovation is transforming businesses before our eyes. From transportation and entertainment to financial services and healthcare, enterprises across industries are benefiting from digital transformation solutions and best-of-breed partners. Now your business can, too.

Cohesity Powered cloud and managed service providers are committed to ensuring secondary data and apps are protected and productive across private, public, and hybrid clouds. Because average isn't good enough for any competitive business, they have been trusted by Cohesity to build a solution that ensures secondary workloads—virtual and physical—are delivered securely and reliably across multi-clouds. With a Cohesity Powered partner, you gain agility and the confidence to blend on-premises private cloud solutions with public cloud and managed services without diverting focus from your core business. You also benefit from differentiated service offerings with pay-as-you go and pay-as-you grow consumption pricing.

### The Cohesity Powered Advantage

Not all service providers help enterprises overcome the challenges of mass data fragmentation and unleash the power of secondary data and applications while ensuring data strategies match application needs. Cohesity Powered partners do.

Providers earning the Cohesity Powered trust mark have made significant investments in Cohesity technologies and training to ensure customer success. They replace secondary silos with a single, web-scale, software-defined solution in onsite data centers, seamlessly extend secondary data and applications to popular public clouds—such as Amazon Web Services, Microsoft Azure, and Google Cloud Platform—and help organizations develop a hybrid cloud.

Cohesity and by extension Cohesity Powered service providers are known for secondary data services capabilities featuring secure multi-tenancy, customer self-service, web-scale with advanced global deduplication, and seamless multi-cloud mobility and management. They accelerate customer journeys to multi-clouds, and empower businesses to unlock greater value from secondary data and applications.

While service providers are securing and reliably managing data, Cohesity has built-in safeguards that make it impossible for Cohesity Powered partners to access enterprise customer files and data. This ensures your organization is always aware of its data in keeping with governance policies and stringent regulations such as GDPR.

### Key Benefits

- Achieve business differentiation from continuous innovation with Cohesity Powered services
- Gain agility and confidence to eliminate mass data fragmentation without diverting focus from core business
- Mobilize enterprise data for a new breed of applications, workflows, and initiatives
- Lower TCO with consistent infrastructure and operations for secondary data and apps across multi-clouds
- Accelerate journey to multi-cloud/hybrid IT and unlock greater value from secondary data and applications
- Easily identify service providers with the most complete, most advanced Cohesity technologies
- Be assured of the greatest degree of interoperability across clouds and the greatest advantage for business with Cohesity Powered services

## Services That Accelerate Business Outcomes

Enterprises that partner with Cohesity Powered service providers speed adoption of multi-cloud environments with turnkey, consumption-based services that simplify hybrid/multi-cloud IT. Cohesity Powered services are cloud standard, built on proven reference architectures from Cohesity and delivered by Cohesity authorized partners. These as-a-service offerings improve operational efficiency and customer experiences:

### Backup as a Service

Rapid backup and recovery with a variety of options, including on-site data protection, direct backup to cloud, and cloud-native backup.

### Archive as a Service

Support for long-term data retention and compliance requirements across clouds with easy data access through global Google-like search.

### Disaster Recovery as a Service

Reliable off-site protection that ensures business continuity with instant mass recovery in case of a catastrophic event at a primary site.

### Filer as a Service

Scale-out NAS for user home directories, departmental network shares, and group collaboration.

### Object Storage as a Service

S3-compatible object storage for unstructured data storage and retrieval.

### Test/Dev as a Service

Faster application delivery with test/dev in the cloud through agile iterations, rapid clones, and faster environment teardowns.

### Analytics as a Service

Insights from untapped data turned into actionable intelligence to streamline compliance as well as proactive and predictive analytics with in-place search and analytics workbench.

### Custom Services

Custom secondary data and apps services, for example security as a service for ransomware recovery, using Cohesity's API-first architecture and RESTFUL APIs.

## Choose a Cohesity Powered Provider

Service providers designated with the Cohesity Powered trust mark will help you solve cost and operational challenges today and future-proof for tomorrow. By choosing a Cohesity Powered provider, your organization is guaranteed to benefit from the type of innovative secondary data protection and productivity across multi-clouds that drives business differentiation and industry disruption.

### Faster Time to Value

Easily integrate existing infrastructure for multi-cloud and hybrid IT success. Mobilize enterprise data for a new breed of applications, workflows, and business initiatives. Free valuable internal resources for strategic projects. Cohesity Powered services reduce complexity by easing service activation, simplifying consumption, and increasing productivity.

### Assured TCO Savings

Lower costs and boost operational responsiveness by retiring legacy technology silos and unifying private and public clouds with one secure, web-scale platform for secondary data and apps from a Cohesity Powered service provider. Enjoy consistent infrastructure and operations and seamless data mobility and management across clouds.

### Continuous Innovation

Eliminate mass data fragmentation, the biggest obstacle to competing as a data-centric business. Increase competitive advantage with the most advanced cloud technology for secondary data and apps. Minimize upfront investment and scale services faster than building out your own infrastructure. Benefit from continuous innovation with Cohesity Powered services.
