

Simplify Secondary Data and Apps Across All Your Microsoft Investments

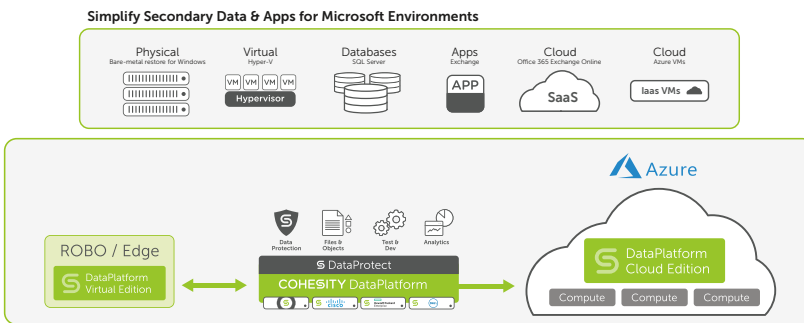

With lines of business increasingly relying on technology for competitive edge, your IT organization needs to maximize every existing and new Microsoft infrastructure and application investment. Data in Microsoft hypervisors, databases, and productivity applications on-premises and in the cloud must be equally protected and productive for your organization to achieve business outcomes. Yet an estimated 80 percent of data is secondary, dark or hidden data.

Cohesity simplifies your secondary data and application management across the Microsoft stack: Microsoft Hyper-V, Microsoft SQL Server, Microsoft Azure, Microsoft Exchange, and Microsoft Office 365.

IT teams trust Cohesity hyperconverged software to speed backup and recovery, strengthen security, streamline compliance, and meet long-term retention requirements from core to cloud. They also rely on Cohesity to enable disaster recovery (DR) as well as instantly deliver dev/test environments for DevOps. For organizations like yours built-on a Microsoft foundation, Cohesity protects all of your secondary data while making it easily accessible with pay-as-you-go and pay-as-you-grow pricing that makes sense.

KEY BENEFITS

- Boost ROI of Microsoft investments
- Simplify all of your secondary data and apps
- Easily scale from on-premises to Azure
- Lower TCO

“Cohesity native cloud integration allowed us to seamlessly archive data to Microsoft Azure blob storage in a secure, encrypted manner using simple yet powerful storage policies. Now our entire storage environment is backed up every hour.”

Comprehensive Protection for Mission-Critical Enterprise Applications

No matter where you run Microsoft workloads, Cohesity DataPlatform™ and Cohesity DataProtect™ deliver powerful, native cloud secondary data management and protection. Native Cohesity integration with Microsoft solutions ensure familiar interfaces and workflows that minimize learning curves for faster time to benefit.

Hyper-V

- Simplify operations with Cohesity's modern, streamlined snapshot approach to backup and recovery for Hyper-V 2012 R2 and Hyper-V 2016 environments.
- Use Cohesity and Microsoft APIs to transform siloed data infrastructure into efficient data centers.
- Integrate Cohesity with Hyper-V System Center Virtual Machine Manager to automatically discover and protect all Hyper-V VMs, and meet SLA's.
- Deliver near-instant RPOs and enable instant mass restores of all your Microsoft VMs with Cohesity.
- Orchestrate more efficiently with resilient change block tracking across all subsystems and inventoried properties using Volume Copy Shadow Services (VSS) and Cohesity's ephemeral agent as a helper.

Azure

- Ease public cloud adoption with Cohesity native Azure integration, simplifying long term retention, disaster recovery, cloud-native backup and test/dev.
- Use policy-based thresholds to automate moving data to Azure.
- Gain operational efficiency with one user interface to globally manage your expanding environment.
- Protect Azure-based applications with snapshot API integration and cloud-native backup.

SQL Server

- Tap Cohesity's scale-out architecture for natively integrated policy-based protection of your SQL databases, including corresponding log files for granular restoration.
- Instantly recover SQL servers—simple and bulk-logged—to fight back from ransomware attacks.
- Clone production SQL servers for use in dev/test environments.
- Use any SQL recovery model including VSS with no added overhead.
- Be more agile with the flexibility to choose native SQL backup or Cohesity's agent-based option.

Office 365 and Exchange Online

- Efficiently access secondary data in Exchange Online mailboxes.
- Speed recovery workflows in the context of mailboxes and save time with indexed email metadata.
- Mitigate risks from your productivity apps while meeting compliance and retention requirements.
- Automatically protect new Exchange mailboxes.
- Search and select backups based on text matching.

Cohesity for your Microsoft environment ensures your organization avoids the need for multiple licenses for data storage and backup. Simplify all of your secondary data and applications across your entire Microsoft portfolio with one software-defined, web-scale platform from Cohesity.
