

Unified data and global governance

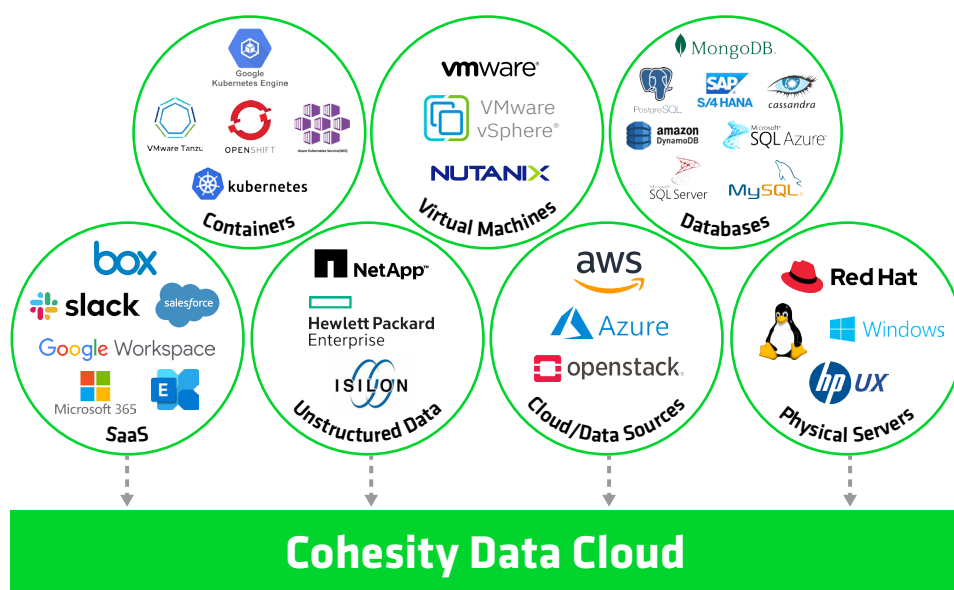

The challenge: Fragmented data and expanding risks

As organizations modernize, their data grows—across virtual machines, cloud-native apps, SaaS platforms, and unstructured storage. But this growth hasn't traditionally come with governance. Instead, it has created silos, fragmentation, and blind spots. That means attackers don't need to breach your important assets. They just need to find the unmanaged, the misconfigured, or the forgotten.

More data in more places, with less visibility and control, has widened the attack surface like never before. Organizations that fail to unify their data protection strategy risk blind spots—unprotected workloads, inconsistent policies, and slow, complex recovery when it matters most. Add in strained IT teams managing this sprawl with fragmented tools and siloed policies and you create a perfect storm for ransomware to thrive and compliance violations to occur.

Key Benefits

- Enhanced security
- Reduced risk
- Improved compliance and governance
- Lower costs and higher ROI
- Increased IT efficiency

The solution: Centralized visibility and control

Before you can begin to achieve cyber resilience, you need to establish both visibility and control. That starts with centralizing protection and governance for all workloads, regardless of where they live.

We address these challenges by bringing all your data under one roof with a modern platform built for today's distributed enterprises. Whether you're backing up VMs on-premises, databases in AWS, or files in Microsoft 365, you can experience global coverage with policy-driven simplicity.

Broad, native workload support

Cohesity natively protects over 1,000 data sources, including:

- Virtual machines (VMs)
- Databases (Oracle, SQL Server, SAP HANA, etc.)
- NAS and unstructured data environments
- SaaS applications (Microsoft 365, Salesforce, Google Workspace)
- Cloud-native workloads (AWS, Azure, GCP, Kubernetes)

No matter where your data resides—on-premises, public cloud, or SaaS—every workload is visible, governed, and recoverable.

Consistent protection across hybrid environments

Your data isn't sitting in one place, so your data protection shouldn't either. Cohesity gives you a common platform that runs across on-premises, cloud, and SaaS, with consistent experiences and centralized control. Deploy how you want: software-defined, pre-built appliances, or as a service. Manage it all through one UI and set of APIs, eliminating tool sprawl and operational silos.

Simplified operations and centralized management

Managing data at scale shouldn't require armies of specialists. Our intuitive interface empowers small teams to oversee vast, complex environments. Automated policy enforcement and a single pane of glass for all workloads drive superior operational efficiency and visibility. A single UI means fewer tools, fewer errors, and faster onboarding.

Reduced data footprint and lower TCO

At petabyte scale, storage efficiency matters. Our unique SpanFS file system delivers industry-leading data compression and deduplication, dramatically reducing storage footprints and costs. Efficient data reduction means lower total cost of ownership and improved ROI without sacrificing performance or recoverability.

Built-in security and compliance

Security is intrinsic to the Cohesity platform, not bolted on. Automated, centralized policies ensure consistent access control, data classification, and compliance enforcement across all environments. Immutable backups, AI-powered anomaly detection, and rapid ransomware recovery are built in.

Why Cohesity?

Cohesity is trusted by the world's leading organizations to secure and manage their most critical data. Our platform is built for:

- Complete workload protection across hybrid and multicloud
- Faster ransomware detection, isolation, and recovery
- Built-in compliance and governance at scale
- Lower total cost of ownership through consolidation
- Future-ready extensibility for evolving IT needs
